Kółko i krzyżyk

Marcel Chołodecki 275818, IEA W12N

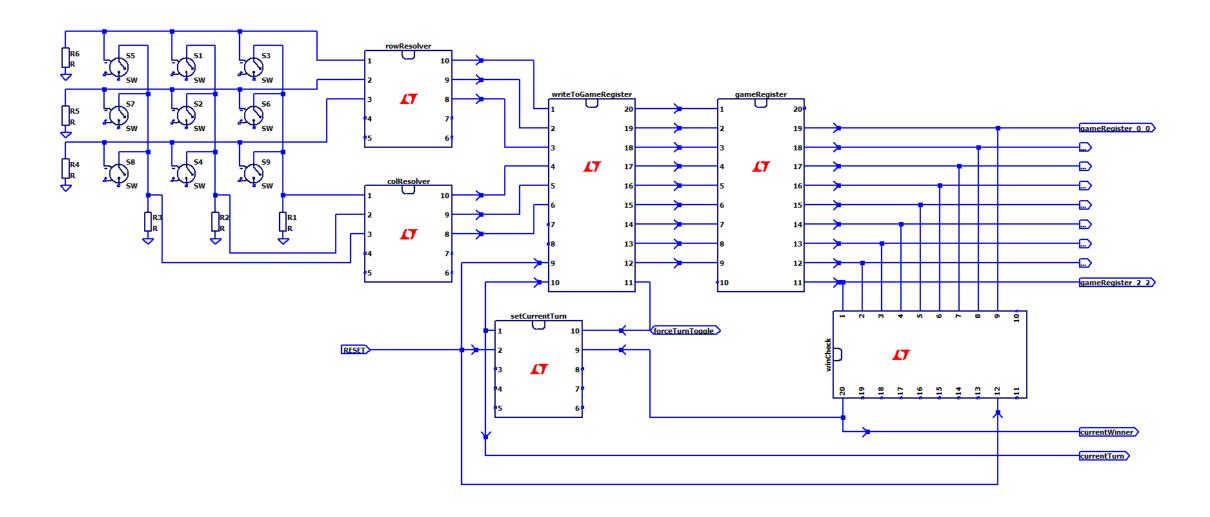

Odgórne wymagania

- Plansza 3x3
- Dynamiczne sprawdzanie wyniku
- Zapis planszy i wyniku do pliku

Wymagania własne

- System pracy na przyciskach (rząd + kolumna)
- Uniemożliwienie dwukrotnego wciśnięcia dwóch przycisków
- Praca asynchroniczna
- Wejścia: RESET, COL (2 downto 0), ROW (2 downto 0)
- Wyjścia: WINER, TURN, GAME (0 to 2) (0 to 2)
- Plansza: macierz 3x3 typu wyliczeniowego t_OX ('-', 'O', 'X')

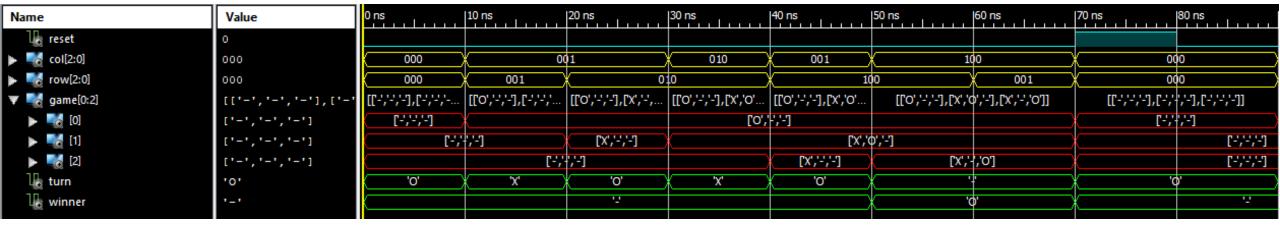

Schemat blokowy układu

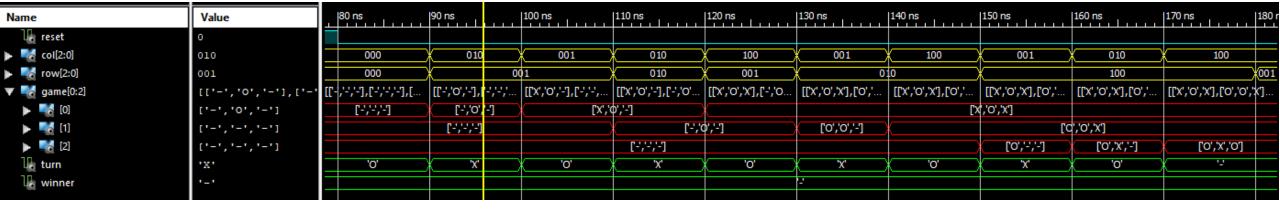

ConflictResolver

```
entity ConflictResolver is
  Port (
     input: in std logic vector(2 downto 0);
     output: out std logic vector(2 downto 0)
  );
end ConflictResolver:
architecture ConflictResolver Arch of ConflictResolver is
  signal preOutput: std logic vector(2 downto 0) := (others => '0');
begin
  findConflict: process(input)
     variable bitsSet: Integer := 0;
  begin
     preOutput <= input;
     bitsSet := 0;
     for i in input'range loop
        if (input(i)) = 'l' then
           bitsSet := bitsSet + 1;
        end if:
      end loop;
      if (bitsSet > 1) then
        -- jesli wektor wejsciowy ma wiecej niz jeden element 'l', to na wyjscie wystaw "000". Jesli nie, wystaw wejscie
        preOutput <= (others => '0');
      end if:
  end process findConflict;
  output <= preOutput;
end ConflictResolver Arch;
```

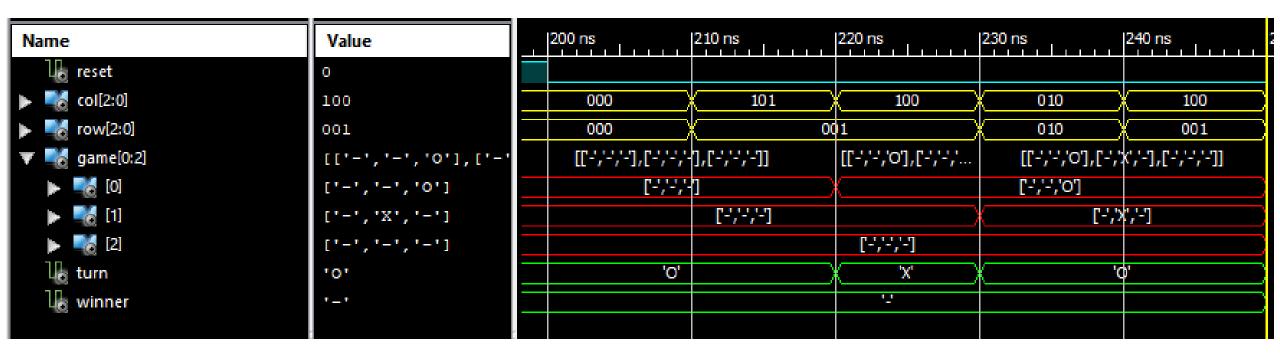

Test: wygrana, reset

Test: remis

Test: nieprawidłowe wejścia

Obsługa zapisu do plików wyjściowych

```
save remis: process(WINNER, TURN, GAME)
begin
   if (TURN'event AND TURN = '-') then if (WINNER = '-') then
     for r in 0 to 2 loop
        write(remis_line, t_OX_to_char(GAME(r,0)) & ' ' & t_OX_to_char(GAME(r, 1)) & ' ' & t_OX_to_char(GAME(r, 2)));
        writeline (remis file, remis line);
      end loop;
     write(remis line, " ");
     writeline (remis file, remis line);
     write(remis line, "REMIS");
     writeline (remis file, remis line);
   end if; end if;
end process save remis;
save win: process(WINNER, TURN, GAME)
begin
  if (TURN'event AND TURN = '-') then if (WINNER /= '-') then
     for r in 0 to 2 loop
        write(win line, t OX to char(GAME(r,0)) & ' ' & t OX to char(GAME(r, 1)) & ' ' & t OX to char(GAME(r, 2)));
        writeline (win file, win line);
      end loop;
     write(win line, " ");
     writeline (win file, win line);
     write(win line, "WIN:" & t OX to char(WINNER));
     writeline (win file, win line);
   end if; end if;
end process save win;
```

Pliki wyjściowe

Dziękuję za uwagę
